PROFILE

I am a junior fullstack developer with over a year of experience in web application development and relational database management design. I have strong creative and analytical skills and am a team player with an eye for detail.

PORTFOLIO

PROJECTS

TWO-SIDED MARKETPLACE APPLICATION

PayProof

2022 (3 Week Coder Academy Assignment)

Provides customer proof-of-funds for a tradie before they begin the job. This helps tradies filter non-paying customers before they begin working for them. I built this marketplace using a ruby on rails tech stack with Ruby, ERB, HTML, CSS, Bootstrap, Sass, PostgreSQL, Heroku, Amazon S3, Github and Notion for project management.

COLOUR THEME PICKER WEBSITE

Colours of Kanye

2022 (2 Day Coder Academy Hackathon)

Provides a theme colour picker with classic Kanye quotes while you browse themes. We had 2-days to create a website using an API of our choice. I collaborated with 4 other developers on this project and we used HTML, CSS, JS, Colour API, Creativehandles API, Kanye API, Github and Trello for project management.

TERMINAL APPLICATION

The Recipe Bot

2021 (1 Week Coder Academy Assignment)

A handy terminal application that takes user-selected recipes and ingredients and then creates an ingredient shopping list based on what the user is missing. I built this terminal app using Ruby, Github, Rspec for testing and Notion for project management.

SKILLS

- Github Workflow Collaboration
- RDBM & ERD Design
- Control Flow & Wireframe Diagrams
- Problem-Solving
- Project Management Tools
- Strong Communication

EDUCATION

DIPLOMA OF IT

Coder Academy (AIT)

2021 - PRESENT
